

music sheet storage

oblique solutions

Wheeling High School
Wheeling, Illinois

the situation:

At Wheeling High School space is extremely valuable. There was a need to fit a large music library in a relatively small room. The band director researched the Wenger product and was ready to purchase it, although he was not completely satisfied. Then he saw the Mobile Shelving / Oblique System. It only took half the space of the Wenger system, and the cardboard boxes (which fall apart) were also eliminated with this system. The hanging compartments, labeling, steel construction, rolling shelves, and price made this a no brainer. *There is no other product available that suits a music library's needs better than mobile shelving and Oblique.*

the solution:

Using Oblique F4 (letter size) box-base and v-base compartments, a system was designed which allowed Wheeling High School to maximize the available space. The sheet music is now much more accessible and takes up less than half the space that was previously used to store the sheet music. Oblique's Color-Keyed Indexing™ was utilized to help locate files efficiently. The compartments were installed in a variety of shelving types on a mobile system. All sheet music titles are printed and inserted into Oblique's magnified 6" label holders. Music title collections are easily managed in much less floor space.
